Scope of Application

Watani Wealth Management Company (the "Company") is a single shareholder closed joint stock company established on 08/05/1439 H (corresponding to 25 January 2018) pursuant to the rules and regulations of the companies' law issued by a Royal Decree No. M/3, dated 28/01/1437 H (corresponding to 10 November 2015). The Company is registered in the Kingdom of Saudi Arabia under commercial registration number 4030605432 dated 02/06/1439 H (corresponding to 18 February 2018).

The Company is licensed to deal as principal and as an agent, managing investment fund, managing discretionary portfolio, arranging, advising and serves as a custodian in the securities business in accordance with the license issued by the Capital Market Authority NO. 17185-37 dated 19/12/1438 H (corresponding to 10 September 2017). The Company is fully owned by National Bank of Kuwait.

In this report we analyze the Company capital adequacy based on audited financial statements for the period ended 31 December 2018, which is the first audited financial statements started from 18 February 2018 (date of the Company's registration at the Commercial Register) to 31 December 2018.

Capital Adequacy Analysis

Capital adequacy refers to whether the Company has sufficient capital to meet certain risks that are usually associated with economy downturn and have conservable effect on financial assets, these risks comprise of credit, market and operations. The Company is subject to these risks and accordingly has to monitor the capital adequacy on regular basis to ensure that the previously mentioned risks are adequately covered by sufficient capital base.

The purpose of this analysis of capital adequacy is to determine whether the Company has sufficient capital and liquidity to continue during economy downturn or a financial crisis. If either capital or liquidity drops below acceptable minimums during the test, it is a signal that the business models or risk-management practices should be changed.

Pillar I refers to minimum capital requirements to meet credit, market and operation risks in accordance with chapter 4 to 16 of the Prudential Rules. Pillar II refers to internal capital adequacy assessment process as explained in part 6 – article 66 of the Prudential Rules. Pillar III provides a detailed and transparent reporting structure that enhances market discipline for all stakeholders of the authorized person's business and operations which leads to improved corporate governance.

The Company continuously assesses their adequacy of its capital to support current and future activities through the following measure:

- The process and strategy for assessing its overall capital adequacy and risk profile.
- Maintenance of minimum capital levels and the ability to hold capital in excess of the minimum.
- Review of Internal Capital Adequacy Assessment Process (ICAAP).
- Monitoring and ensuring compliance to CMA regulations with appropriate actions being taken when required.
- The ability to intervene at an early stage to prevent capital from falling below the minimum levels.

With respect to capital adequacy management, the Company implements the following policies and procedures in order to manage capital and their adequacy:

- Calculate the capital adequacy ratio on monthly basis in accordance with applicable regulations and guidelines;
- Capital should be of high quality and loss absorbing. Quality of capital is determined through the application of the common and best practice criteria for common equity, and additional tier 1 and tier 2 capital, with emphasis on retained earnings as the highest quality of capital;
- Capital should adequately protect against unexpected losses. Quantity of capital should rest above regulatory minimums and sufficiently reflect Company's risk appetite and risk profile capturing all material risks and taking into account forward-looking factors such as the strategic plans;
- Report the capital adequacy ratio along with detailed computations to regulators;
- Maintain minimum capital adequacy and monitor this minimum level on regular basis;
- Identify the impact of investment decisions over risks, liquidity and capital adequacy;
- Manage assets, liabilities and monitor future cash flows;
- Set a level of leverage ratio for the Company and owned subsidiaries;
- Monitor large exposures and asset concentration on regular basis; and
- Follow up newly released rules and regulations that affect the capital adequacy calculation.

The calculation and reporting of capital adequacy is based on the following procedures:

- 1- Calculation of capital base based on tier one and tier two of capital.
- 2- Developing and calculating risks related to market, credit and operations. Other risks may be considered based on the circumstances.
- 3- Calculation of minimum capital required to meet the calculated risks.
- 4- Calculating of capital adequacy ratio and resulting surplus.
- 5- Drawing results and making recommendations to mitigate impact of risks.
- 6- The above process should be based upon predefined and set policies, procedures with regular review and monitoring.

Based on above policies and procedures the Company appropriately manages and controls capital and their adequacy.

Capital Structure

The Company is fully owned by National Bank of Kuwait (a company listed in Kuwaiti stock exchange market). The Company paid up capital is SR 90 million which comprises of 9 million shares at par value of SR 10 per share.

Capital base related to tier one comprises of paid up capital, reserves, retained earnings (or accumulated deficit) after deducting intangible assets, zakat and other applicable deductions from tier one capital. Capital base related to tier two comprises of revaluation surplus related to fair value investments routed through other comprehensive income. Non-controlling equity and short term loans (where applicable) are not included in capital base. Refer the schedule shown below for the calculation of capital adequacy ratio and surplus. Also the composition of shareholders' equity is available in the annual financial statements.

The company investment portfolio as of 31 December 2018 comprises of short term investments in the amount of SR 62 million and fair value investments routed through profit and loss in the amount of approximately SR 3.75 million bringing the total investment portfolio to SR 65.75 million. Other assets include bank balances, accounts receivable and prepayments, property and equipment and intangible assets all totaling SR 34.58 million. Total assets as of December 31, 2018 is SR 100.34 million.

During the period of 2018, the Company was able to manage investments as to their different risks and liquidity in a proper manner and there were no instances that the Company faced issues that result in major risks and losses in relation to large exposure to market, credit, operations or any other risks.

In the following table we illustrate the capital adequacy calculation for the year 2018 based on the information and explanations shown above:

Description	Dec. 31, 2018 SR ('000')
Capital base:	
Tier – 1 capital	74,051
Tier – 2 capital	-
Total	74,051
Minimum Capital	
Credit risks	19,514
Market risks	985
Operations risks	10,849
Total	31,348
Capital adequacy ratio	2.36
Surplus	42,703

Tier -1 capital is calculated as follows:

Description	Dec. 31, 2018 SR ('000')
Paid-up capital	90,000
Less:	-
Accumulated losses	(15,503)
Intangible assets	(446)
Total Tire – I capital	74,051

Risk Management and Compliance

The function of risk management at the Company is to develop and maintain programs that protect assets from unanticipated loss by providing systematic risk analysis, developing techniques to reduce potential exposure to loss, and procuring and administering insurance and self-insurance programs in accordance with the Company's in place risk management policies and procedures.

Specifically, risk management's primary goal is to minimize the adverse effects of accidental losses by either stopping losses from happening using risk control techniques, or paying for those losses that unavoidably occur, using risk financing or risk transferring techniques.

Risk management policy forms part of a framework established by the Board to provide for systematic and responsible management of risks that are, or could be, incurred by the Company in carrying out its various activities.

Risk management policy is intended to ensure that costs, anticipated benefits and potential risks associated with particular activities are accurately considered. Where the balance of advantage favors particular activity or initiative, the possible risks will be planned for and managed, taking account of broader company objectives and priorities.

Risk management enables the Company's management to effectively deal with uncertainty and associated risk and opportunity, enhancing the capacity to build value for its customers and shareholders.

Compliance function is an independent function whose main objectives are: to ensure that the Company complies with the requirements of authorized person regulations; to assist the Board of Director, management, employees and the registered persons to comply with any requirement issued by CMA to appear to explain any matter or to assist in any enquiry relating to the administration of the Capital Market Law and its implementing regulations; and to assist in the efficient management of consequent risks.

In practice, these objectives are reached by:

- Identifying, evaluating, controlling and monitoring the compliance risks (as defined here below) affecting the Company;
- Organizing the compliance-related controls by structuring, coordinating and/or delegating them;
- Reporting to and advising the Executive Management and/or the Board of Directors;
- Submitting recommendations and corrective actions when appropriate; and
- Acting as advisor in compliance matters to Executive Management.

Compliance is a key element of Corporate Governance, which is about encouraging the Company fairness and integrity, improving transparency and increasing responsibility.

Credit Risk

Credit risk is the risk that one party will fail to discharge an obligation and will cause the other party to incur a financial loss. The Company seeks to manage its credit risk with respect to banks by only dealing with reputable banks and with respect to clients by setting credit limits for individual clients, monitoring outstanding receivables and ensuring close follow-ups.

The Company currently has on past due claims or impaired liabilities and not expected to confront such risk factors in the future based on business model and activities. The Company undertakes credit assessment report before making any investment decision and all investments are evaluated on regular basis as to credit risks factors.

The Company uses credit rating for evaluating cash deposited / invested with banks and other authorized persons and other investments in money markets. The credit quality step, risk weighted assets and credit risk mitigation have been calculated based on CMA guidelines. Please refer to Appendix 111, IV and V for more details.

Credit risks are calculated as follows:

Description	Dec. 31, 2018 SR ('000')
Total risk weighted assets (see details below)	139,388
Credit risk calculation as 14% of risk weighted assets	19,514
Capital requirement	19,514

Risk weighted assets used for credit risk calculation are summarized as follows:

Description	Dec. 31, 2018 SR ('000')
Administrative bodies and NOP	15,552
Authorized persons and banks	13,439
Corporates	2,197
Investment funds	100
Other exposures	39,139
Off balance sheet commitments	68,961
Total	139,388

Market Risk

Market risks in general comprise of equity, investment funds, bonds, commodities, foreign exchange rate, underwriting, excess exposures and settlement. The only applicable risks to the Company for the period of 2018 are investment fund risk and foreign exchange rate which is associated with Company's investments denominated in USD.

Investment fund risk is the risk related to holding particular investments by the fund which are exposed fully or in part to fluctuations in the local or international stock market including equity securities, debt securities, and other products traded therein. Also the investment holdings by the fund may be directly correlated to market risks despite the fund does not hold these assets. The measure of investment fund risk is typically the standard deviation of the fund's net asset value over a number of periods.

Currency risk is the risk that the value of financial instruments will fluctuate due to changes in foreign exchange rates. The Company is subject to fluctuations in foreign exchange rates in the normal course of its business. The Company did not undertake significant transactions in currencies other than Saudi Riyals, Kuwaiti Dinars and US Dollars during the period ended on 31 December 2018. As the Saudi Riyal is pegged to the US Dollar, balances in US Dollars are not considered to represent significant currency risk.

The Company monitors market risks related to equity price and currency risks on regular basis. The market prices of fair value investments through P/L and fair value investments through other comprehensive income are reviewed on daily basis and proper research reports are performed to identify over/under valued securities. Macroeconomic research reports are also performed on regular basis to assess systemic risks and their potential impact on the respective portfolios in the proprietary book investments.

The calculation of this risk is summarized as follows:

Description	Dec. 31, 2018 SR ('000')
Total assets denominated in foreign currency (USD)	19,223
Foreign exchange rate risk	385
Investment fund position	3,752
Investment fund risk	600
Capital requirement	985

Operations Risk

For operational risks, the Company used the expenditure based approach to assess the operational risk. This is performed by multiplying the risk charge of (25%) with the yearly overhead expenses to obtain the amount of 10.85 million. The calculation is summarized as follows:

Description	Dec. 31, 2018 SR ('000')
Total overhead expenses	43,395
Operations risk calculation as 25% of overhead expenses	10,849
Capital requirement	10,849

Liquidity and Cash Management

Liquidity risk is the risk that the Company will encounter difficulty in raising funds to meet commitments associated with financial instruments. Liquidity risk may result from an inability to sell a financial asset quickly at an amount close to its fair value. The Company's manages its liquidity risk by monitoring investing activities and cash flows on regular basis.

There are no funding requirements for other investments or a pressure to liquidate any existing investment during a short period of time and therefore no liquidity risk is associated thereto. Also apart from what have been discussed above other investments are not subject to market risk or credit risk.

Financial Stress Testing

Financial stress testing refers to techniques used by the Company to assess the impact of probable events on the Company's financial position and hence capital adequacy. It is a risk management technique used to evaluate the potential effects of financial variables on investments and operations. Senior management monitors the outcomes of stress testing on regular basis and ensures that the Company has sufficient capital to encounter any negative impact therefrom. In the following paragraphs we discuss the general impact of certain events on the Company's financial position and capital adequacy.

Fall in Stock Market Index

The Company may have exposure to local stock market ("TASI") or international stock market and to perform a stress testing on this exposure we assume certain percentage decline in TASI (or in the international stock market or index) and apply the same effect on the Company portfolio to identify the impact on financial position and capital, we believe that the impact of this downturn is currently covered by risk calculation and capital adequacy and management will continue to monitor this particular risk in the future.

Devaluation in Real Estate Market

The Company may have exposure to local or international real estate market and we may assume certain percentage devaluation in Saudi or international real estate market and apply the same effect on the Company real estate investment and capital, we believe that the impact of this downturn is fully covered by risk calculation and capital adequacy and management will continue to monitor this particular risk in the future.

Fall in Asset under Management NAV

Assets under management managed by the Company may be attributable to different assets classes such as equities, real estate, money markets, fixed income and other. An assumption of certain percentage decline in one or more of assets classes to which the assets under management NAV is attributable and apply the same effect to assess total impact on assets under management and financial position and capital of the Company. We believe that this risk is fully covered by risk calculation and capital adequacy and management will continue to monitor this particular risk in the future. It is assumed that the fund manager will exercise skills and experience in asset selection and allocation to mitigate effect of the any downturn in overall economy on total value of assets under management.

Default on debt securities

The Company may have exposure to debt securities investment (Sukuk or bonds) and we may assume a certain default percentage on the total of the investment portfolio and apply the same effect on financial positions and capital, we believe that this credit default is fully covered by risk calculation and capital adequacy. However, it is remote that this risk takes place taken into consideration management's asset allocation policies but we would like to apply more conservative analysis for capital adequacy.

Increase in LIBOR – Impact on debt securities

If we assume certain devaluation in debt securities value due to expected increase in LIBOR taking into consideration that these securities are classified in the Company's financial statements as amortized cost investment and any devaluation may not have immediate impact on the carrying value of the investment unless the Company is forced to sell part of these securities to exploit available opportunity or for any other reason, therefore and to take into account all foreseeable risks we assume this devaluation may take place, however we believe that this decline is fully covered by risk calculation and capital adequacy.

Commission rate on money markets

Commission rate risk is the risk that the value of financial instruments will fluctuate due to changes in the market commission rates. The Company is subject to commission rate risk on its commission bearing assets including investments in money market placements and funds, investments in syndicated money operations and other similar investments. The Company manages its exposure to commission rate risk by continuously monitoring movement in commission rate. As shown in the audited financial statements for the period ended 31 December 2018, the Company had significant amounts invested in money markets, we assume that the downturn economy effect on market will expectedly result in a decrease in profit rate on these investments and we do not expect the principal investment will suffer from any credit risk since the capital of these transactions is guaranteed and that the Company deals with only reputable banks in the region. Additionally, these deposits are very liquid and are classified in the balance sheet under cash and cash equivalents.

Conclusion

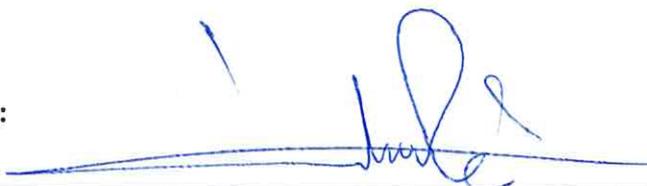

Based on the results of the analysis, the capital adequacy ratio is 2.36 based on the audited financial statements for the period ended 31 December 2018, indicates that the Company has proper management of credit, market and operational risks and the level of these risks appears to be acceptable. Also the Company appears to be liquid and have sufficient capital to continue their operations during macroeconomic downturn.
